Construction Update

November 21, 2024

Over the past two weeks, the contractor installed the waterproof membrane on top of the new concrete box culverts, which allows water to flow under a road, railroad, or trail from one side to another and support improved drainage flow. The contractor also filled potholes throughout the project area.

Next week, the contractor will begin preparations to install a pressure release valve as a part of water system improvements.

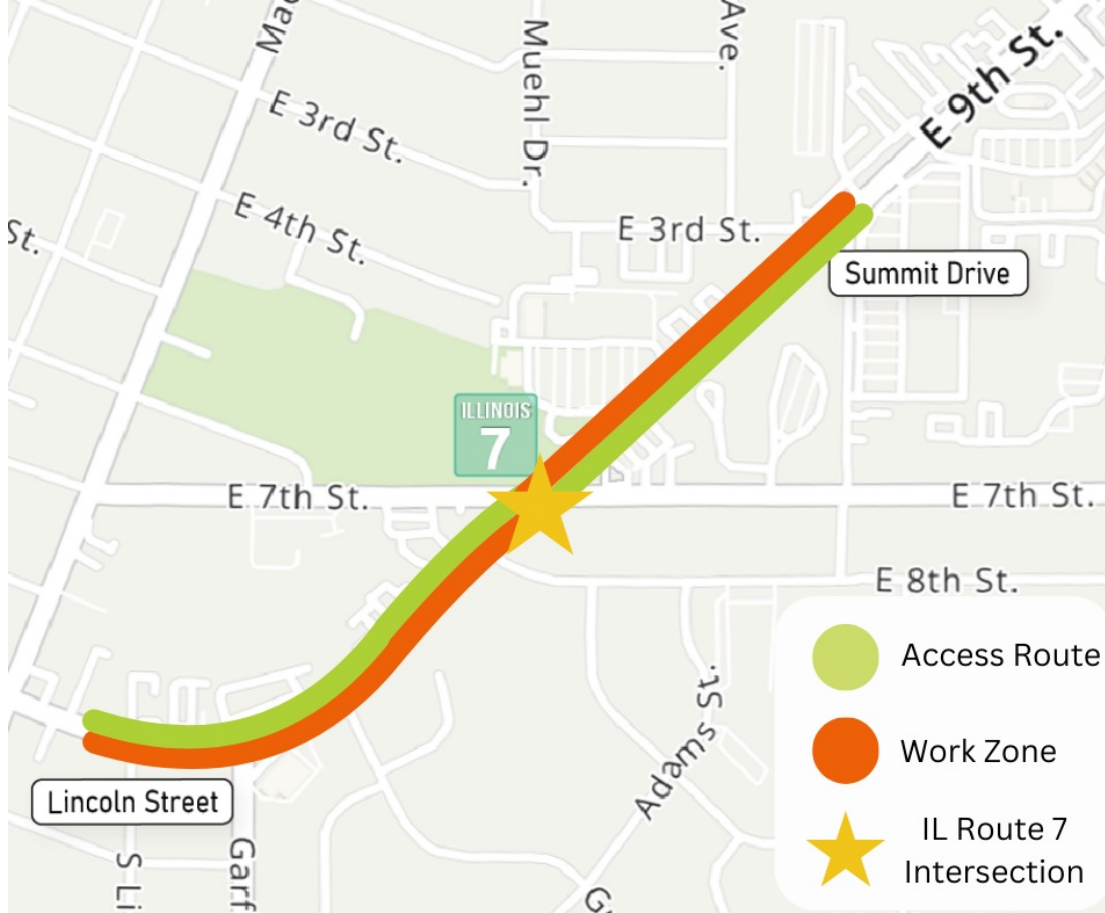

Any impacts to traffic or lane closures will be shared daily. Please use caution when traveling through the area.

Happy Holidays, Drive Safe!
